Zylo is the leading SaaS Management Platform for enterprise businesses. Zylo empowers your organization to discover, manage, measure and govern all enterprise SaaS applications from one system of record.

SaaS Has Changed Enterprise Software Management

SaaS business tools are now abundantly available and easy to purchase by anyone. This accessibility leads to decentralized purchasing by business units and teams, creating the challenge of obscured data, hidden costs, and unvetted security risks.

Zylo data shows that:

- **$10,000**
  Enterprise businesses’ total investment in SaaS represents spending $10,000 per employee.

- **2–3x**
  Companies underestimate the number of applications present by two to three times.

- **2/day**
  The average enterprise business sees two SaaS renewals every day.
Zylo Enterprise SaaS Management

With more than $8 billion in SaaS under management, the Zylo SaaS Management Platform empowers enterprise organizations to create an accurate system of record for organizing and maximizing SaaS investments. With insights into spend, security, utilization, renewals, and user feedback, Zylo creates the ability to:

Discover All Applications
Uncover full visibility into spend and ownership across the entire organization from a single view.

Manage Licenses and Renewals
Optimize the value of every license by right-sizing subscriptions, licenses, and users, as well as creating a proactive strategy for renewal planning.

Measure Adoption and Utilization
Capture actual application utilization data and user feedback to gain a more complete understanding of value and maximize ROI.

Govern with Flexible Oversight
Directly manage and secure mission-critical enterprise apps, and monitor or distribute access and control for less critical applications.
